

PADMANABHAN ELANGO MANIVANNAN

Forward Deployed Engineer | Senior Software Engineer

Chennai, India (open to relocation across Canada) • +91 97915 28298 • paddhu.xd96@gmail.com • linkedin.com/in/prathick96

Work authorization: Canada Spousal Open Work Permit (in process) — open permit; no employer sponsorship or LMIA required

SUMMARY

Senior Software Engineer with 7+ years spanning on-site product delivery, solutions engineering, L2/L3 application support, and hands-on AI engineering. Forward-deployed delivery specialist who has installed, configured, and commissioned a proprietary enterprise platform at customer sites across the USA and Peru — owning environment preparation, DHCP/networking, LDAP SSO, SSL/TLS, go-live support, and operator training. Now ships production AI: RAG pipelines, agentic workflows, and Model Context Protocol (MCP) integrations in Python and Node.js. Calm under customer-critical, floor-down conditions; communicates effectively across cultures and languages.

TECHNICAL SKILLS

Languages: Python, Node.js, JavaScript / TypeScript, Java / Java EE, SQL, Bash

AI / LLM: RAG (Retrieval-Augmented Generation), Agentic AI & agent orchestration, Model Context Protocol (MCP), Prompt engineering, LLM evaluation, Vector databases & embeddings, n8n

Deployment & Integration: On-site implementation, LDAP / SSO, DHCP scope configuration, SSL/TLS & certificate management, REST APIs, JBoss / WildFly EAP, Spring MVC, Microservices

Support & Infrastructure: Linux, networking, multi-server environments, L2/L3 support, SLA management, incident response, root-cause analysis, SQL production data fixes

Cloud & DevOps (foundational): AWS, GCP, Docker, Git, CI/CD

Ways of working: Agile / Scrum, customer training, stakeholder management, technical documentation, cross-cultural communication

PROFESSIONAL EXPERIENCE

Light & Wonder — Senior Software Engineer

Jan 2022 – Present • Chennai, India

Forward-deployed product delivery and L2/L3 support for the Slot Data System (SDS), a proprietary casino slot-management platform.

- Led end-to-end on-site delivery of SDS across 4 enterprise deployments in the USA (Miami, Las Vegas, Texas) and Peru (Lima) — preparing customer environments, configuring DHCP scopes for device connectivity, and integrating customer LDAP for SSO logins.
- Designed and deployed an SSL/TLS certificate-expiry monitoring tool: a centralized service that polls every application server for certificates consumed by L&W applications and emails stakeholders a configurable number of days before expiry — rolled out across multiple customer sites, preventing expired-certificate outages and giving on-site techs ample lead time to renew.
- Owned go-live technical support through customer-critical windows, resolving floor-down incidents and operational outages with minimal disruption to live casino operations.
- Trained casino operations staff and managers on the platform, making customer teams self-sufficient from day one; in Peru, bridged a complete English–Spanish language barrier to deliver the installation.
- Executed SQL production data fixes for critical application engines and built workarounds to keep casino floors running; implemented SSL/TLS certificates across multiple web applications for security and regulatory compliance.
- Delivered SLA-bound support to casinos across the USA, Canada, South America, Australia, New Zealand, and South Africa, consistently meeting KPI targets.

Hexaware Technologies — Application Lead Support Engineer

Apr 2020 – Dec 2021 • Chennai, India

- Led L3 support and maintenance of the payment gateway for the Liverpool Victoria (LV=) Insurance e-commerce platform.
- First in the account to introduce an agile workflow; facilitated Scrum ceremonies and stepped up as Lead Engineer, backfilling a senior (G6) resource.
- Drove quarterly releases for the Travel Insurance application and maintained configuration-change records. ACE Award for outstanding performance (May 2020).

Hexaware Technologies — Java Developer

Jan 2019 – Apr 2020 • Chennai, India

- Built and deployed an end-to-end Spring MVC application and an online portal validation system on a microservice architecture; unit-tested with JUnit and Mockito (J2EE, JIRA, Git). SPOT Award (Dec 2019).

Hexaware Technologies — Associate Software Engineer Trainee

Aug 2018 – Dec 2018 • Chennai, India

- Full-stack trainee; designed and deployed an end-to-end Spring MVC application following agile, serving as Scrum master.

AI PROJECTS (ONGOING)

- **Agentic workflow automation** — multi-step AI agents orchestrated with n8n and LLM APIs, using MCP servers to connect models to external tools and data sources for task automation.
- **RAG knowledge assistant** — Python retrieval-augmented generation pipeline over private document sets with vector embeddings, returning grounded, cited answers.
- **LLM tooling & integrations** — Node.js services exposing custom MCP tools, with prompt design and evaluation to improve output reliability.

EDUCATION

B.Tech, Computer Science & Engineering — SRM Institute of Science and Technology, Chennai, India • 2018
